Water heating accounts for an average of 18% of the total energy used in the household, or around 162 kWh per month. On a normal day, a water heater runs for around 2 to 3 hours a day, which means that it will consume roughly 4-5 kWh of electricity a day. Heat pump water heaters are more efficient and can run on around 2.5 kWh per day. But power outages ...

This generator usually comes with solar panels, a solar panel battery, an inverter, and a battery charger. In a simpler term that most people say to define a solar generator, it is a portable power station that uses solar panels to provide electricity, instead of using traditional fossil fuels.

The maritime industry is another transportation sector undergoing rapid change in how operations are powered. Our focus on marine vessel electrification leverages our expertise in BESS, integrating modular battery power supplies designed specifically for the harsh marine operating environment and compatible with both high- and low-voltage AC and DC power systems.
