

Does Europe have a battery storage market?

Europe's annual battery storage deployments doubled in 2023, but the pace of adoption is still much slower than required, according to SolarPower Europe. The continental trade association for solar PV industries published new analysis of the sector in its report, European Market Outlook for Battery Storage 2024-2028.

Where is France's largest battery energy storage system located?

reported a while back on the completion of an expansion at continental France's largest battery energy storage system (BESS) project. BESS capacity at the TotalEnergies refinery site in Dunkirk, northern France, is now 61MW/61MWh over two phases, with the most recent 36MW/36MWh addition completed shortly before the end of 2021

Where is Saft battery storage located?

Saft battery storage at the Dunkirk project. Image: Saft. A second installation phase has been completed at TotalEnergies' battery energy storage facility in Dunkirk, northern France, bringing its output and capacity to 61MW /61MWh.

Is France a good place to invest in battery storage assets?

This is all the more encouraging because unlike the UK, there are only two revenue streams available for battery storage assets in France today. The other is frequency control reserve (FCR), aka primary control reserve (PCR), what could be seen as the first rung of the ancillary services ladder.

How many large-scale battery storage facilities are there in Sweden?

This initiative represents the deployment of 14 large-scale battery storage facilities with a total capacity of 211MW/211MWh - a historic investment and milestone in Sweden's transition towards a fossil-free energy system here and now.

What is the largest unified battery storage portfolio in the Nordics?

Sweden's Minister for Climate and the Environment Romina Pourmokhtari has inaugurated the largest unified battery storage portfolio in the Nordics, a pioneering initiative developed by Ingrid Capacity in partnership with BW ESS.

Battery energy storage systems allow for the storage of excess generated electricity from renewable sources,

which can then be used in period where low renewable energy is generated. Moreover, advancements in battery technology as well as improvements in management systems and software have made BESS a more cost-effective and efficient option.

Energy-Storage.news recently reported on Russia's military attacks on Ukraine's electricity grid, and how battery energy storage systems (BESS) are being built to help mitigate against the risks of outages. Military attacks from the air are a whole separate issue but the threat of an "inside man" can be mitigated against, Johansen said.
