

Belgium power back up services

Will Belgium become more reliant on electricity imports?

If policy remains unchanged, we will see Belgium's dependence on electricity imports steadily increase, from 50-60 TWh in 2036 to 70-90 TWh in 2050. Without a long-term strategy on the future energy mix and new policy measures, Belgium will therefore become more reliant on electricity imports.

How does Belgium's transmission system work?

However, the transmission system also directly supplies a large number of heavy industrial consumers. Belgium's distribution system is composed of medium- and low-voltage networks (below 30 kV) and serves the majority of electricity consumers, with 4 825 659 connection points in 2020.

Does Belgium have a cyber security policy?

In recent years, Belgium has taken steps to enhance resilience of the electricity system to cyber-attacks. The central authority for cybersecurity in Belgium is the Centre for Cyber Security Belgium (CCB), which was created by Royal Decree of 10 October 2014, and is under the authority of the Prime Minister.

Will Belgium's energy mix be reliant on imports in 2035-2050?

Belgium's existing generation facilities and already-approved investments can provide only half of what is needed in the long term. Therefore, new governments will soon have to consider the desired energy mix for the period 2035-2050 and how reliant the country is willing to be on imports.

Does Belgium have a target for cross-border electricity interconnection capacity?

Under EU rules, Belgium has binding targets for cross-border electricity interconnection capacity, and Elia operates interconnections with connected countries. Targets are based on the ratio of interconnection import capacity and domestic generation capacity. Belgium met its 2020 target of 24% and has a 2030 target of 33%.

Will Belgium expand its interconnection capacity with the Netherlands?

Projects under development will expand Belgium's interconnection capacity with the Netherlands and increase maximum technical interconnection capacity to 8.4 GW. Under EU rules, Belgium has binding targets for cross-border electricity interconnection capacity, and Elia operates interconnections with connected countries.
