

How does the Brazilian electricity model work?

The Brazilian electricity model is fully deregulated, which allows generators to sell all of their “assured energy” via freely negotiated contracts with consumers above 3 MW or via energy auctions administered by CCEE (see energy auctions below). Under this model, distributors are required to contract 100% of their expected demand.

What are the characteristics of the Brazilian energy matrix?

The main characteristic of the Brazilian energy matrix is that it is much more renewable than that of the world. While in 2019 the world matrix was only 14% made up of renewable energy, Brazil's was at 45%.

Who won Brazil's largest auction of infrastructure power transmission project?

Being the largest auction of infrastructure power transmission project ever held in Brazil, the project was won by China's State Grid last December, following the Chinese company's previous two bids for the Belo Monte UHVDC transmission project in Brazil.

How did Brazil reform the electricity sector?

This reform also led to the creation, in 1996, of ANEEL (Brazil's National Electricity Regulatory Agency), a quasi-independent regulatory body in charge of overseeing the electricity sector. However, the main restructuring steps were taken with the enactment of the 1998 Law (Law 9648/98).

Who owns electricity in Brazil?

In Brazil, large government-controlled companies dominate the electricity sector. Federally owned Eletrobrás holds about 40% of capacity (including 50% of Itaipu), with state-companies CESP, Cemig and Copel controlling 8%, 7% and 5% of generation capacity respectively. About 27% of generation assets are currently in the hands of private investors.

Why does Brazil need a power grid?

The national grid runs at 60 Hz and is powered 83% from renewable sources. This dependence on hydropower makes Brazil vulnerable to power supply shortages in drought years, as was demonstrated by the 2001-2002 energy crisis.

A Milestone in the Nation's Hydrogen Economy Development: Carlton Power Secures UK Government Support for Green Hydrogen Projects. In a significant stride towards achieving the UK's Net Zero goals, Carlton Power, a prominent independent energy infrastructure development company, has emerged successfully in Round One of the UK Government's ...

Carlton Power is very sad to report the death of Ian Shields, aged 80; we extend our deepest condolences to Ian's wife, Moira, and family. Ian was a board director of Carlton Power, working closely with Keith Clarke,
