Burundi: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of

Burundi simes energy

382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. Its most important power source is hydroelectric power, representing 95% of total pro...
