

What is Croatia's energy strategy?

In February 2020, the Croatian government adopted a new Energy Strategy for the period until 2030, with an outlook through 2050. The Strategy includes a wide range of energy policy initiatives that will improve energy security, increase energy efficiency, lower dependence on fossil fuels, increase local production and increase renewable resources.

What is energy in Croatia?

Energy in Croatia describes energy and electricity production, consumption and import in Croatia. As of 2023, Croatia imported about 54.54% of the total energy consumed annually: 78.34% of its oil demand, 74.48% of its gas and 100% of its coal needs.

How can Croatia become energy-independent and sustainable?

In order to become energy-independent and sustainable, Croatia counts on its abundant renewable energy resources. In February 2020, the Croatian government adopted a new Energy Strategy for the period until 2030, with an outlook through 2050.

How does Croatia get its electricity?

Croatia satisfies its electricity needs largely from hydro and thermal power plants, and partly from the Krško nuclear power plant, which is co-owned by Croatian and Slovenian state-owned power companies. Renewable energies account for approximately 31.33% of Croatia's energy mix.

Should Croatia invest in solar & wind power?

With its long Adriatic coastline, Croatia is eyeing rapid development of solar and wind power, says Dražen Jakšić, director of Zagreb's Hrvoje Požar Energy Institute. There is strong investor interest in backing new projects that would greatly increase Croatia's current clean power generating capacity of just over 1GW, he added.

Who is the distributor of electricity in Croatia?

Under the 2004 Energy law, customers in Croatia are allowed to choose their preferred distributor of electricity. However, HEP Operator distribucijskog sustava or HEP-ODS (a Hrvatska elektroprivreda subsidiary) remains the largest distributor to both industry and households.

The overall consumption of energy is expected to be drastically reduced by 2050, by 17% in S2, and by 26% in S1. Changes are also expected in the composition of overall energy consumption. Renewable energy ...
