

Do you pay for solar panels

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about £7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 12 and 17 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

How much do solar panels cost in the UK?

According to the Energy Saving Trust, the average solar panel system in the UK is 3.5kWp, with an overall average cost of £7,000. That can rise to as much as £9,000 for a 5kWp system if you have a larger home. These figures represent the total cost, including the panels themselves and the installation costs, which can be substantial.

Do you own solar panels?

You OWN the solar panels. Under these schemes, you pay for solar panels over a fixed period, say 20 years. There are no upfront costs, and instead you pay a monthly fee, which usually covers the solar panel and battery installation, repairs and maintenance.

Why do solar panels cost so much?

Solar panel quality significantly impacts their cost. Higher-quality panels, made with superior materials and advanced technology, offer greater efficiency, longer lifespans, and better warranties. This higher upfront cost is justified by increased energy production and durability, leading to greater long-term savings and reliability.

Should you buy solar panels with cash?

Purchasing solar panels with cash involves a significant upfront investment, but it offers the quickest return on investment. It's also the simplest option, avoiding monthly payments and interest accrual. Solar subscription plans enable you to access solar energy while avoiding high upfront costs.
