

Can a solar array power Tokelau?

Solar Array's seen on the three tiny islands of Tokelau to completely produce solar power energy. The renewable energy system comprising of solar panels, storage batteries and generators running on biofuel derived from coconut will generate enough electricity to meet 150% of the islands' power demand.

How much electricity does a solar system provide in Tokelau?

Each system alone is among the largest off-grid solar power systems in the world, and together they are capable of providing 150% of current electricity demand in Tokelau, a much higher amount than the 90% that was originally planned for.

Will Tokelau's solar energy system be upgraded?

Tokelau's solar energy system is set to be upgraded on each of its three atolls. Jointly funded by the governments of Tokelau and New Zealand, the \$NZ9 million (\$USD5.7m) system will be installed by New Zealand company Vector PowerSmart.

Can Tokelau achieve 100% solar power?

However, to reach a true 100%, Tokelau must now focus on developing the ability to locally produce the fuel needed for transport and for the diesel engines that back up the solar installations. Figure 4. Cluster block diagram for Tokelau solar project

What will a 210 kilowatt solar system mean for Tokelau?

Vector PowerSmart chief operating officer Colin Daly said the project would mean the people of Tokelau would enjoy "clean, reliable and renewable energy" for years to come. Additional 210 kilowatt solar arrays would be installed on Atafu, Fakaofu and Nukunonu, along with two megawatt hour lithium ion battery storage systems.

Where does Tokelau get its electricity from?

Except for that part of the electricity supply provided by Solar Photovoltaic (PV) to TeleTok facilities on all three atolls and the University of the South Pacific (USP) facility on Atafu, essentially all energy in Tokelau currently is from imported petroleum.
