

How much does energy cost in the Dominican Republic?

This profile provides a snapshot of the energy landscape of the Dominican Republic, a Caribbean nation that shares the island of Hispaniola with Haiti to the west. In 2014, the Dominican Republic's utility rates were approximately \$0.19 per kilowatt-hour (kWh), 1 below the regional average of \$0.33/kWh.

What type of energy does the Dominican Republic use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Fossil fuels - including oil, natural gas, and coal - supply most of the Dominican Republic's energy, supplemented by smaller amounts of renewables, including hydro, wind, solar and biofuels.

How can the Dominican Republic integrate solar and wind resources?

The short-term variability and geographic diversity of the wind resource will need to be studied before implementation of projects. The Dominican Republic has created a framework for integrating solar and wind resources in its grid that can drive renewable energy adoption for years to come.

What is the Dominican Republic's Energy Roadmap?

This roadmap was developed in close co-operation with the National Energy Commission (Comisi3n Nacional de Energ3a or CNE). It quantifies what can realistically be achieved by 2030 in the Dominican Republic's total energy system in terms of renewable energy technology potential, cost and savings.

Is solar energy a viable resource for the Dominican Republic?

High solar potential, along with integrating efficiencies and economies of scale, can make solar energy a viable resource for the Dominican Republic. Similarly, wind energy has strong potential, particularly in the southwest.

Which sector consumes the most energy in the Dominican Republic?

Transport: this sector consumes the most energy in the Dominican Republic yet national energy plans do not consider renewables deployment for the sector. Liquid biofuels could replace gasoline and diesel but no market exists. Demand needs to be created by setting targets.

OverviewHistoryInternal structureAffiliated agenciesExternal linksThe Ministry of Energy and Mining (Spanish: Ministerio de Energ3a y Minas) of the Dominican Republic is a government institution in charge of the responsible development of the country's energy and mining sectors. Its main concern is to keep a reliable energy infrastructure and preserve an adequate exploitation of the country's minerals.

The addition boosts the wind farm's capacity from 34 MW to 50 MW, enabling it to supply clean energy to more than 50,000 Dominican homes and reduce the need for importing approximately 258,000 barrels of oil. This expansion strengthens Matafongo's position as a key player in the Dominican Republic's renewable energy sector.

<p>Santo Domingo.- The energy transition involves shifting from an electricity production system based on fossil fuels--such as coal, petroleum derivatives, and natural gas--to one dominated by renewable and ...

Euromonitor International's Energy Drinks in Dominican Republic report offers a comprehensive guide to the size and shape of the market at a national level. It provides the latest retail sales data (2018-2022), allowing you to identify the sectors driving growth.

The Pecasa project is a key driver of Dominican Republic's energy transition. The project represents SFS's first equity investment in the Caribbean. One of the largest wind farms in the Dominican Republic, the Pecasa project represents SFS's first equity investment in ...
