Enhanced green fluorescent protein or EGFP or simply GFP is a protein that exhibit bright green fluorescence when exposed to light in the blue to ultraviolet range. The major advantage of this protein is that it can form internal chromophore without requiring any accessory enzymes/substrates, cofactors, gene products other than molecular oxygen.

Genix Healthcare was started in 2005 with one overarching goal: to fill the gap in dentistry due to the shortage of dental care professionals on the NHS. Over the last decade-and-a-half, our understanding of the dental profession at Genix Healthcare has expanded, as has the spectrum of dental care provided at our practices.
