

Grenada host energy systems

How much energy can Grenada generate?

According to estimates from the United States' National Renewable Energy Laboratory, Grenada could eventually generate up to 20 MW from wind, 25 to 50 MW from solar, and more than 50 MW from geothermal energy.

Who is responsible for energy projects in Grenada?

The MOID (Ministry of Infrastructure Development, Public Utilities, Energy, Transport, and Implementation) is responsible for energy programs in Grenada. MOID handles the majority of permitting related to energy projects.

Does Grenada have a wind farm?

Grenada has had success with implementing energy efficiency and renewable energy projects. To date, GRENLEC has assessed five sites on the main island and two on Carriacou for wind farm feasibility. A wind-diesel hybrid has been discussed for Petite Martinique, but its development is on hold.

Who owns the electricity in Grenada?

Utility investors: 50% with U.S.-based WRB Enterprises; the public holds 25%; and the government, its employees, and the National Insurance Scheme Grenada hold the remaining 25%. Nearly 99% of electricity is sourced from diesel fuel. The utility maintains an installed capacity of 48.6 MW spread across the three islands.

How much does electricity cost in Grenada?

The 2015 electricity rates in Grenada are \$0.34 per kilowatt-hour (kWh), in line with the Caribbean regional average of \$0.33/kWh. Like many island nations, Grenada is almost 100% reliant on imported fossil fuels for electricity generation, leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity.

Does Grenada have solar power?

Solar photovoltaics (PV) have high potential on Grenada because the country's global horizontal irradiation exceeds 5 kWh/square meters per day. A 2- to 4-MW PV installation is planned, but no utility-scale solar plants are currently in operation.

So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product.

The HoSt heat and power plants are extremely suitable for the greenhouse sector and can supply renewable

Grenada host energy systems

heat, power and CO2 to the greenhouse, and any company with sustainability ambitions. HoSt also owns & operates own systems and can step in as energy supplier for (collective) heat/power offtake.
