As with all battery technology, the cost of grid-scale battery storage is decreasing, making it a more economically viable option for grid operators. According to Bloomberg NEF's annual battery price survey, lithium-ion battery pack prices, which were above \$1,200 per kilowatt-hour (kWh) in 2010, fell 89% in real terms to \$132/kWh in 2021 ...

to optimize utilization and lifecycle value of battery energy storage, life predictive modeling becomes increasingly important. Typically, end-of-life (EOL) is defined when the battery degrades to a point where only 70-80% of beginning-of-life (BOL) capacity is remaining under nameplate conditions. Understanding temperature impact on battery
