Which grid tie inverter has a limiter?

The Y&H GTN-1200W Grid Tie Inverter is one of the best grid tie inverters with a limiter. It is designed to efficiently supply power precisely in line with your load requirements, preventing any excess electricity from being sent back to the grid.

How does a grid tied limiter work?

Note: The Grid Tied Limiter cannot be able to limit power 100% accurate, it will have some excess power sent to the grid or supplement by the grid. But in most of the time, it will supplement by grid. The "limiter" looks at the load and then tells the grid-tie inverter to reduce its output to equal the load.

How does a grid-tie inverter work?

But in most of the time, it will supplement by grid. The "limiter" looks at the load and then tells the grid-tie inverter to reduce its output to equal the load. As they explain, the purpose of the "limiter" is to get around a smart meter (which charges you for power you export to the grid), by greatly reducing the power sent to the grid.

CT sensors are only a requirement if there is no box between grid and main panel (since any box located there can obviously monitor the current through itself). The GTILs must rely on CT sensors to monitor import and avoid any export because they are positioned in parallel with the grid and otherwise have no way to monitor grid current...
