

Himawari solar price in Saint Pierre and Miquelon

What is Himawari solar lighting system?

LA FORET ENGINEERING CO.,LTD. (Mori Building Group) Copyright (C)2022 LAFORET ENGINEERING CORPORATION. All rights reserved. Himawari solar lighting system brings real natural sunlight indoor by using the convex lens and quartz glass optical fiber cables. Let natural light light up your house to improve the life quality.

What is the Himawari system?

The Himawari system consists of a sunlight collector (lens focusing unit), quartz glass optical fiber devices, an automatic tracking system, and the outer acrylic dome. The outer acrylic dome covers all the devices and protects them.

How does Himawari light work?

Its outdoor sunlight collector collects sunlight passes through quartz glass optical fibers which transmit visual ray-dominated real sunlight to anywhere you want. Compared to regular LED light which is specific radiations triggered from electronic energy, the natural light of Himawari is direct from real sunlight.

How much light does a Himawari system emit?

Light is emitted at a spread angle of 58° from the edge of an optical cable. At two-meter from the end of the optical fiber, an approximately 1.5-m diameter circle region is illuminated at approximately 1,036 luxon average (per cable) and one Himawari system is equipped with two cables.

How many Lux does a Himawari system have?

At two-meter from the end of the optical fiber, an approximately 1.5-m diameter circle region is illuminated at approximately 1,036 luxon average (per cable) and one Himawari system is equipped with two cables. We have an automatic dimmer system available which allows you to switch between the Himawari and artificial illumination systems.

Can I switch between the Himawari and artificial illumination systems?

We have an automatic dimmer system available which allows you to switch between the Himawari and artificial illumination systems. Sunlight is condensed about 10,000 times through a highly efficient lens.
