Keywords: Renewable energy, market value, cannibalization effect, cross-border trade, electricity JEL: C23, D4, Q41, Q42 The average revenue, or market value, of wind and solar energy ...

penetration of wind and solar energy will bring several new challenges to the European electricity transmission network. The objective of this paper is to understand the effects of a high ...

In previous posts in our Solar + Energy Storage series we explained why and when it makes sense to combine solar + energy storage and the trade-offs of AC versus DC coupled systems as well as co-located versus ...

For the 2021-2027 funding period, a new category of eligible projects has been introduced in the energy part of the revised Connecting Europe Facility (CEF) programme: cross-border projects in the field of renewable energy. The new ...

In this paper, we empirically study the multiple cross-border effects on the value of renewable energy: on one hand, interconnection is a flexibility resource that allows to export ...

The International Energy Agency (IEA) has identified three main modes of cross-border integration: bilateral, multilateral and unified. Within these modes, multiple categories may be defined. For example, bilateral trades may be ...

[22] introduces an optimization model using online reinforcement learning to manage wind-solar energy storage systems, improving power tracking and reducing storage costs. In [23], ... In ...

For instance, Keppel Energy, a subsidiary of the Singapore conglomerate Keppel Company, is creating the largest cross-border contract with Cambodia's Royal Group Power to build energy resilience. With a goal to import up to 4 GW of ...
