

Ireland's National Energy and Climate Plan (NECP 2021-2030) includes a planned RES-E of 70% in 2030, while Ireland's Climate Action Plan 2023 (CAP 23) includes a target to increase the share of electricity generated from renewable sources up to 80% by 2030. The Government set an ambitious national target for RES-E of 40% for 2020.

close to 0% renewable generation is essential for reliability. Strategic Storage as well as Seasonal Storage of zero carbon energy is needed in Ireland to deliver a reliable decarbonized energy system. Being able to operate the power system at times with 100% renewable generation is key. Extended periods of low-wind conditions already occur today

After oil, gas is Ireland's second most prominent energy source. Gas makes up almost half of our electricity generation and will be required for many years to supply flexibility as renewable generation grows. We are highly dependent on imported gas, which leaves us exposed to growing geopolitical tensions and shifts in the global power balance.

It is making the grid ready to carry up to 80 per cent of Ireland's electricity from renewable sources, as set out in the Government's Climate Action Plan. EirGrid's "Shaping Our Electricity Future" roadmap provides a pathway to achieving this, says Mark Foley, its chief executive.

In what could be Europe's first, FuturEnergy Ireland has proposed a project that could store energy for up to 100 hours and be operational for 30 years. From ESS News Ireland could host Europe's first large-scale, iron-air project southwest of Buncrana town in Donegal County.

Renewable heat use in Ireland is dominated by the use of solid biomass. Increased use of wood waste as an energy source in wood processing is the reason for most of the growth since 2000.
