Overall, our choice for the top solar generator is the Jackery Portable Power Station Explorer 500, which provides over 500 watt-hours and eight output ports, but is still lightweight enough to bring with you on the go.

The 3000-watt rating on a generator means the maximum watts that can be used at any specific moment should be 3000 watts at a particular voltage. This then means that while it is possible to plug in more appliances, the output voltage will lower, and this would then mean the appliances are operating at lower than optimal voltage capacity.

In addition, a 3000 Watt solar generator will have limitations compared to a typical 5kW solar power system. It is good to check with your manufacturer or a licensed solar contractor to learn more about your solar generator system and its operation limitations. It is also advisable to be aware of the safety requirements of your solar generator.

We have serious doubts that a 3000-watt generator would provide enough power to run a central AC unit. We would rather go for a very small emergency window AC unit as 3,000-watt generators may have too little starting power. However, the answer to this question really depends on the number of running and starting watts your AC unit requires.
