So a 500W load will last less than 12 hours on a 500ah battery. These are the reasons why. On paper it will look like this: $500\text{ah} \times 12\text{V} = 6000 \text{ watts}$. $6000 / 500 = 12$. In fact, the more amps drawn the faster a battery will lose power. If an appliance draws 500 watts / 41.6ah an hour for example, the battery will not last 5 hours.
