

What is the multi-objective collaborative optimization of shared energy storage system?

In MRMES, the multi-objective collaborative optimization of shared energy storage system and demand response is considered. The one-day research cycle is divided into 24 periods, and the two optimization objectives of the total operating cost of the system and the net environmental impact in the energy conversion process are considered.

How do we integrate storage sharing into the design phase of energy systems?

We adopt a cooperative game approach to incorporate storage sharing into the design phase of energy systems. To ensure a fair distribution of cooperative benefits, we introduce a benefit allocation mechanism based on contributions to energy storage sharing.

How can shared storage improve energy systems?

By integrating shared storage into these projects, system operators can better manage their energy resources, improve grid stability, and support the transition to renewable energy sources. This model fosters participants cooperation and investment, leading to more sustainable and resilient energy systems. 6. Conclusions

What is combined demand response and shared energy storage?

Combined demand response and shared energy storage achieve complementary utilization of electrical energy and load shifting in time and space. In a word, a number of regional multi-energy systems are interconnected to form a "union" organic whole.

Does sharing energy-storage station improve economic scheduling of industrial customers?

Li, L. et al. Optimal economic scheduling of industrial customers on the basis of sharing energy-storage station. *Electric Power Construct.* 41 (5), 100-107 (2020). Nikoobakht, A. et al. Assessing increased flexibility of energy storage and demand response to accommodate a high penetration of renewable energy sources. *IEEE Trans. Sustain.*

Is shared energy storage planning based on cooperative game?

A generation-side shared energy storage planning model based on cooperative game. *Global Energy Internet.* 2 (04), 360-366 (2019). Li, Y.-W. et al. Multi-energy cloud energy storage for power systems: Basic concepts and research prospects. *Proc. CSEE* 43 (06), 2179-2190 (2023).

To address this issue, this section constructs a H-ESRS optimization model under energy type and power type demand scenarios, so that lay a solid foundation for collaborative ...
