

What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

Are molten salt thermal energy storage systems sustainable?

Overall, molten salt thermal energy storage systems have the potential to play a crucial role in future energy systems, and further research and development in this field is essential for maximizing the potential of these systems and achieving a sustainable energy future. ...

Does China support salt cavern energy storage?

The Chinese government currently offers robust support for the salt cavern energy storage industry and has incorporated CAES into the national "14th Five-Year Plan", thereby providing substantial backing for research on salt cavern CAES.

How can large-scale energy storage be implemented in salt caverns?

Compressed air and hydrogen storage are two main available large-scale energy storage technologies, which are both successfully implemented in salt caverns. Therefore, large-scale energy storage in salt caverns will also be enormously developed to deal with the intermittent and fluctuations of renewable sources at the national or grid-scale.

What role do salt caverns play in energy storage?

With the demand for peak-shaving of renewable energy and the approach of carbon peaking and carbon neutrality goals, salt caverns are expected to play a more effective role in compressed air energy storage (CAES), large-scale hydrogen storage, and temporary carbon dioxide storage.

Are salt caverns a good choice for energy storage?

Among all the underground structures, due to their strong tightness/stability, lower proportion of cushion gas, and good operational flexibility, salt caverns are regarded as the most favorable choice for energy storage—especially for gas, hydrogen and compressed air.
