What is the working mode of PV energy storage inverter?

PV energy storage inverter Working mode 7.2 Mode 2(Peak- shaving and valley-filling) This mode is suitable for use in areas with peak and valley electricity price. According to the electricity price at different time periods, the corresponding time can be set to charge and discharge from the grid.

What happens if a solar inverter does not export power?

Self-Use mode stores the excess PV power into the battery. If the battery is charged, or there is no battery, the excess PV power will be exported (sold) back to the utility company. If the system is set to not export any power, then the inverter will curtail the PV power (derate the inverter output power).

How does a StorEDGE inverter work?

The produced power is stored in the battery to be used during power outages. The StorEdge inverter senses the grid voltage, and when it is down it automatically switches to Backup mode, disconnecting from the grid and supplying power to the backed-up loads.
