

Photovoltaic inverter capacitor test

How do you test a PV inverter?

To test a PV inverter according to IEC 62093, identify a suite of accelerated tests to identify potential reliability weaknesses. Develop recommendations for how the tests are to be performed, including sample size, environmental test conditions, duration, power and monitor, etc. Provide a baseline for comparison of reliability performance between PV inverter manufacturers.

What are the different types of PV inverters?

IEC 62093 outlines four categories of PV inverters:

- Category 1: Inverter and DC-DC converters < 700W AC
- Category 2: Wall mounted assemblies, such as string inverters and small 3-phase inverters
- Category 3: Free-standing single bay assemblies up to 100 kW AC
- Category 4: Free-standing multi-bay assemblies over 100 kW AC

What are the different types of inverter & DC-DC converters?

According to IEC 62093, there are different types of inverters and DC-DC converters:

- Category 1: Inverters and DC-DC converters < 700W AC
- Category 2: Wall mounted assemblies, such as string inverters and small 3-phase inverters
- Category 3: Free-standing single bay assemblies up to 100 kW AC
- Category 4: Free-standing multi-bay assemblies over 100 kW AC

Two levels of test requirements apply to these categories.
