Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:

How do I install a solar photovoltaic system?

The most efficient way to install a solar photovoltaic system is by using a Heliomotion. Simply because a Heliomotion has innovative sun-tracking technology that enables solar panels to track the sun throughout the day and year. The possibilities for mounting solar are endless.

Should I replace my solar hot water system?

While we highly encourage you to replace small parts before doing an entire overhaul, a solar hot water system past its prime may be more trouble than it's worth (remember that in some situations, a heat pump hot water system may actually be more efficient and cost-effective). Why does my solar hot water system overflow?

How does a solar hot water tank work?

Whether mounted on the roof, positioned directly on the solar collector, or tucked deep into a basement, the tank holds all of the necessary hot water a home may need safely in one place. Solar hot water tanks are typically well-insulated to keep heat in.

How does a solar water collector work?

When solar energy is available the automatically controlled pump circulates solar heated water from the collectors through the solar storage tank to reach the desired temperature (130°F to 180°F). The collector's basic function is to capture the sun's energy and to transfer the heat collected to the fluid circulating throughout the system.

Are solar hot water systems low maintenance?

Solar hot water systems are typically low maintenance, but it is important to follow your installer's guidance. Solar water heating systems installed by an MCS contractor will come with a five-year workmanship warranty and 10 years or more for the panel warranty.

Step 1: Mount the solar collectors. In most solar hot water installations, the first step is to put the solar collectors in place on your roof. Most solar hot water collectors are similar in shape to photovoltaic solar panels and ...

Solar panel angle. Calculating the Optimal solar panel Angle. As a rule of thumb, solar panels should be more vertical during winter to gain most of the low winter sun, and more tilted during summer to maximize the
