

## Are solar PV systems a good investment in Libya?

In Libya, the solar photovoltaic (PV) systems are encouraging for the future, due to incident solar radiation is greater than the minimum required rate across the country (Hewedy et al., 2017). Based on that from a techno-economics point-view, there is a need to develop substantial energy resource solutions.

## How has Repsol contributed to the development of Libya?

Since then, the success achieved by Repsol in its projects and discoveries have contributed to making Libya one of the most outstanding countries for Repsol's growth strategy, and are also making a strong contribution to the development and consolidation of the current and future wealth of the country.

## What are the main energy sources in Libya?

Libya relies fully on fossil fuels to generate its electricity; hence, the Natural Gas and Oilare the key energy sources (Sorensen, 2010). The power stations in Libya are dependent on light and heavy oil, with a growing dependency on natural gas (Asheibe and Khalil, 2013).

## Could Libya be a solar energy exporter?

The desert technology (DESRT-TEC) is one of the largest projects; there was proposed that Libya would be one of the exporters of solar power generated from solar energy to Europe (Griffiths, 2013). The aims of that project to provide Europe Union countries with energy generated from the sun in North Africa and the Middle East countries.

Which sector has the highest electricity demand in Libya?

In Libya,the history of load profile data indicates that throughout the summer months,the maximum power occurs and that the residential sectoraccounts for the highest share of the demand for electrical energy,which represents 36%.

#### How much does a PV system cost in Libya?

Opening the door through encouraging for vendors to imports such equipment or for developing industrial sectors locally. The PV system for electricity in the Libyan market is estimated to cost about "5-13,000" Libyan/denars(this price from private business companies); depending on the size/capacity that invested by the private sector.

Renewable portfolio standards (RPS) and clean energy standards (CES) are either requirements or goals for energy producers or providers to supply energy from low- or zero-carbon emission sources. These policies require or encourage energy suppliers to provide their customers with a stated minimum share of energy from eligible energy resources.

Advancing Clean Energy Schools (ACES) Program. RPS is supporting Queensland's Department of
