

Solar Photovoltaic Power Station Policy

What is a photovoltaic power station?

A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected photovoltaic power system (PV system) designed for the supply of merchant power.

What policies are being introduced in the solar energy industry?

A set of supportive policies have been introduced including the Feed-in Tariff Scheme, Photovoltaic Poverty Alleviation Project, and other demonstration projects. Later regulation, de-subsidization, and solar power consumption became the hot spot.

Should solar PV be supported in the UK?

Support for solar PV should allow cost-effective projects to proceed and to make a cost-effective contribution to UK carbon emission objectives in the context of overall energy goals - ensuring that solar PV has a role alongside other energy generation technologies in delivering carbon reductions, energy security and affordability for consumers.

How do we support solar PV deployment?

Support for solar PV should assess and respond to the impacts of deployment on: grid systems balancing; grid connectivity; and financial incentives - ensuring that we address the challenges of deploying high volumes of solar PV. The Solar PV Roadmap, published in October 2013, established the principles for solar PV deployment in the UK.

Why should we support solar PV?

Support for solar PV should deliver genuine carbon reductions that help meet the UK's target of 15 per cent renewable energy from final consumption by 2020 and in supporting the decarbonisation of our economy in the longer term - ensuring that all the carbon impacts of solar PV deployment are fully understood.

Are solar PV installations eligible for government rebates?

Once accredited with the Clean Energy Council, solar PV installations are eligible for government rebates such as Small-scale Technology Certificates and feed-in tariffs.
