What is a solar boiler?

Solar Boilers are a Steam Age source of Power Generation that turns water into steam with sunlight. There are two variants, the Simple Solar Boiler and High Pressure Solar Boiler which has three times the output of the former. Both require silver to craft, which makes them difficult to source before having access to the Twilight Forest at LV.

What is a high pressure solar boiler?

The High Pressure Solar Boiler is an upgraded version of the Simple Solar, producing 360L/s at full power. It calcifies in the same way, but will never go below 120L/s. It can be restored to full capacity by breaking and replacing when it starts to lose production.

What happened to the simple solar boiler in GregTech 5 unofficial?

In GregTech 5 Unofficial version 5.09.16, a change was made to the Simple Solar Boiler. As the Boiler is left active and supplied with normal Water instead of Distilled Water, it will slowly calcify, reducing its Steam output.

How much steam does a solar boiler produce?

It is a low-tech boiler that produces Steam from sunlight. While heated, the Solar Boiler has the same steam output as the Small Coal Boiler of 150L Steam per 25 Ticks, or 6L/overall. The Simple Solar Boiler uses the same heating and cooling math as the Small Coal Boiler, however its "fuel" is more complicated.

charcoal pit can make up to 1k+ charcoal in 10 minutes, solar boilers for steam are pretty good. You will need more steam to power your steam turbine for LV power. I'd suggest making 1 high pressure boiler and 3-4 solar boilers. If you have discord the GTNH channel can answer all of your questions :)

I lasted most of LV/MV with a solar boiler set-up feeding 4 LV steam turbines. Once I hit HV I upgraded to a Steve's Carts tree farm -> Advanced Coke Oven -> GT large steel boiler -> HV ...

High Pressure Solar Boilers are calcifying significantly quicker than they were for me on 2.1.0.0, can't confirm if the same is true for regular Solar Boilers but I would presume they work on the same code. FTBWiki says that the calcification process (after the initial delay where they work at full capacity) should take approx. 3 and a half hours.

High pressure solar boilers make 360L of steam per second. So if you want the EBF to run at 100% uptime means you need 18 high pressure solar boilers. That said you can use a mix of power sources and you don't exactly need to run it with 100% uptime right out of the gate, and getting to MV allows you to have access to better machines and thus ...

Im in steam era and have the materials for and 2 by 2 by 2 high pressure boiler from railcraft with 8 high pressure boiler parts and wondering how many water tanks from railcraft for it to always be supplied with water in an 100% humidity biome, and the constant number of charcoal it would use an hour at top temperature where it just has to maintain temp.
