

Solar listed company in Liberia

How much solar energy potential does Liberia have?

Liberia has a high and consistent potential for solar energy, with an average level of 1,712 kWh/m²/year, which could generate 1,400 to 1,500 kWh/kWp. Some 43% of the land is covered with forests (41,790 square kilometers, World Bank 2015), but this does not affect the solar energy potential.

What is the sustainable power source in Liberia?

In Liberia, sustainable power is harnessed from tight-knit communities to provide life-changing products and services, starting with access to solar electricity. Electricity creates opportunities -- opportunities to learn, communicate, start a business, and build a better life.

Why is electricity important in Liberia?

Electricity is important in Liberia because it creates opportunities, such as learning, communication, starting a business, and building a better life. Unfortunately, less than 1% of rural Liberians have access to electricity. However, reliable, safe electricity is now affordable for nearly anyone. LIB Solar focuses on mobilizing communities instead of selling to individual customers to achieve economies of scale.
