

Solar panel in cost Estonia

Why should you choose a solar panel system in Estonia?

A solar panel system will save you money on energy, and can also be used as a backup power source during power outages. The Estonian climate is favorable for solar energy production. The country experiences approximately 1600 hours of sunshine a year and the climate is relatively cool.

What to do with solar energy in Estonia?

We have prepared an exciting tour - go on a ride on the wind turbine nacelle or take a walk at the solar park, the annual electricity output of which is equivalent to the average annual consumption of 300 Estonian homes. We produce renewable solar energy in Estonia and Poland. We own 38 solar parks with a total capacity of 30 MW.

Why do solar parks generate the most electricity in Estonia?

In Estonia, solar parks usually generate the most electricity in May, as the days are quite long and the temperature is lower than in June-July. Lower temperatures help increase efficiency. It is also possible to generate energy in cloudy weather, because solar radiation reaches the solar panels through the clouds as well.

Can solar panels be installed on a flat roof in Estonia?

In Estonia, most solar panel installations are installed on pitched roofs. Ideally, the panels should be installed at a 41 degree angle on the south side of the building. If they are installed to the north, the panels will not generate electricity. Alternatively, flat roofs may also be installed with solar panels.

How many solar panels are installed at Estonia dairy farm?

We built a solar power plant on the roof of Estonia Dairy Farm in Järva County, where we installed 644 solar panels. Over the years, we have vigorously expanded our solar energy production. The parks are located in 38 locations. More than 100 000 solar panels in total are located in our solar parks. The parks are located in 38 locations.

How much solar radiation does Estonia produce a year?

In Estonia, the amount of solar radiation is comparable to Central Europe; the average amount of radiation has an optimal slope and azimuth of 1100-1200 kWh/m², 85% of which falls between April and October. An optimally installed 1 kW PV plant produces 900 to 1000 kWh of energy per year.

Solar panels are the best way to start generating your own 100% clean energy, save on electricity costs and increase the value of your real estate. We offer three ways for business customers and apartment associations to introduce solar energy - solar energy on a turnkey basis, solar energy in instalments, and solar energy as a service with no ...
