How much solar power does New Zealand have?

There is currently around 270 MW of installed solar generation in New Zealand. This adds up to about the same capacity of a coal or gas fired Rankine generation unit. Out of the 270 MW of solar, about 180 MW is in the North Island and is mostly made up of rooftop solar installations.

How can solar power help New Zealand?

We're working with the sector on New Zealand's renewable energy and low-emissions transition. We're responsible for the governance and regulation of New Zealand's electricity industry. Solar power can help you become more self-sufficient, reduce your carbon footprint and reduce your energy costs.

Can New Zealand benefit from solar power adoption?

If Germany can achieve this with lower potential, NZ can certainly benefit from our sunnier days. Fortunately, New Zealand is not only in a great position to change gears on solar power adoption, but the change is already underway.

Will New Zealand see more solar power by 2050?

In a report called 'Te Mauri Hiko Energy Futures', the grid operator Transpower forecast that New Zealand could see an installed solar capacity of up to 27 GW by 2050. Compare this to the current installed capacity of a few hundred megawatts, and the predicted growth seems explosive.
