The first part is the power optimizer, which handles DC to DC and optimizes or conditions the solar panel's power. There is one power optimizer per solar panel, and they keep the flow of energy equal. For example, with a standard string inverter, if one solar panel produces less energy, all the solar panels in that string will produce less energy.

Microinverters are significantly more expensive than string inverters when you start thinking about them on a whole-system basis. If a solar panel system comprising 12 panels had a string inverter, it would cost around €1,400, whereas if it had a microinverter on each individual panel this would cost closer to €2,100.
