

How does a variable swept area vertical axis wind turbine rotate?

3.1. Basic wind turbine theory The proposed variable swept area vertical axis wind turbine rotates based on the resultant torque generated in the direction of motion of lift and drag components. The generated lift and drag forces are resolved into tangential direction to produce torque due to which makes the wind turbine to rotate.

What is a vertical axis wind turbine?

The vertical axis wind turbine is one of the most attractive propulsion systems for sustainable energy generation around the globe. The performance of a vertical axis wind turbine is greatly dependent on wind speed, blade set angle and more importantly the rotational speed.

What is a vertical axis wind turbine (VAWT)?

Recently, there are many researchers from the academic and industry sectors that have turned their attention to developing the vertical axis wind turbine (VAWT), where the main advantage of the VAWTs is capturing the wind from any direction.

How does a vertical axis wind turbine affect CP?

The values of the generated torque, power coefficient, and TSR are presented in Table 4 and Fig. 10. Increasing the blade length f a vertical axis wind turbine (VAWT) can affect the coefficient of power (CP). CP represents the efficiency of a wind turbine in extracting power from the wind.

What are the different types of vertical axis wind turbines?

The two primary types of vertical-axis wind turbines are Savonius and Darrieus(Castellani et al. 2019). The Savonius wind turbine is a popular form of VAWT that produces torque through the interaction of drag and side forces. Usually, these turbines have two or three arc-shaped blades (Tian et al. 2015).

Can variable swept area improve power vs speed of wind turbine?

Power vs speed of wind turbine for different angle of the rotor blades. Fadil and Ashari developed HAWT with the variable swept area through flexibility in radius and they found that the variation in the swept area could make a remarkable improvement in power generation by 260 %.
