

What is Parker in the energy storage system

How does the Parker outdoor energy storage PCs work?

In addition to its primary purpose of feeding active power (P , measured in watts) from the battery modules to the grid, the Parker outdoor energy storage PCS is capable of providing reactive power (Q , measured in VARs) when called upon.

How does Parker power system work?

Output power is handled by replaceable phase modules, which are cooled by Parker's advanced 2-phase cooling system. Each module contains IGBT power semiconductors, DC bus capacitors, and gate drive circuitry. The easily removable modules weigh only 16 kg (about 35 pounds), and average time to swap is under 15 minutes.

Where are Parker outdoor energy storage PCs manufactured?

Inverters and balance of PCS are manufactured at our ISO9001:2008 certified facility in Charlotte, NC, and satisfy ARRA "Buy American" provision. The Parker Outdoor Energy Storage PCS is equipped with a comprehensive list of protective devices for safe and reliable operation.

What is a Parker Drive & how does it work?

In operations around the world, Parker motion controls and variable speed drives facilitate manufacturing processes like lamination, extrusion, die cutting, scoring, and material handling. Additionally, Parker drives provide energy savings in process-related pumping and ventilating.

Does Parker offer grid tie inverters?

Parker offers grid tie inverters and related equipment in numerous configurations and sizes for a variety of renewable energy applications in addition to energy storage. Direct drive permanent magnet generators and specialized inverters provide power conversion for wind and wave power.

How does the Parker 890GT-B energy storage PCs work?

The Parker 890GT-B Energy Storage PCS employs a unique modular inverter design for ease of maintenance and service. Output power is handled by replaceable phase modules, which are cooled by Parker's advanced 2-phase cooling system. Each module contains IGBT power semiconductors, DC bus capacitors, and gate drive circuitry.
