

What kind of tape should be used to stick energy storage lithium batteries

What are the types of lithium battery tape?

According to different requirements, lithium battery tape can generally be divided into the following types: 1. By substrate: PET, PI. 2. By glue: acrylate (acrylic) series, silicone pressure sensitive adhesive series, rubber pressure sensitive adhesive series, etc. 3.

Why should you use Lohmann adhesive tape for lithium ion batteries?

Lohmann offers multifunctional adhesive tape solutions and high-precision die-cuts for thermal and electrical management of Li-Ion batteries. Safety, reliability and efficiency over the whole lifetime of the lithium-ion battery and hence the bonded joints are paramount.

Why do you need a tape for your EV battery?

For example, in an EV battery our tapes do not only efficiently connect the cells to the cooling system, but also prevent sensitive components from short circuits by realizing excellent grounding or, as part of a laminate, help protect against fire.

Why should you use multifunctional tape in the battery manufacturing process?

Using multifunctional tape solutions in the battery manufacturing process combines multiple benefits: They offer immediate and strong adhesion and thus fast handling and add functionality in just one product.

Why should you use Lohmann adhesive tape?

Safety, reliability and efficiency over the whole lifetime of the lithium-ion battery and hence the bonded joints are paramount. Lohmann adhesive tape solutions offer a more flexible and weight-saving alternative to mechanical fastening methods, featuring an easy and clean assembly compared to liquid bonding.

How can a PET film protect a battery from dielectric breakdown?

For the electrical insulation of sensitive battery components and effective protection against dielectric breakdown, Lohmann offers various single- or double-sided PET films. They can be applied to metal parts of the battery, e.g., on side panels, cell housing or battery case components.
